

Vantage point

Serious threats. Strong measures.

Industrial facilities today present unique challenges that can stand in the way of even the most well-considered emergency response plan. The situation on the ground can change in an instant. What starts out as a path to safety can quickly become a direct route to danger.

With offices and production lines alongside hazardous goods storage and transfer points, there's a lot that can go wrong. Under these circumstances it's not practical to merely alert people to the presence of danger – they need to be guided to safety, warned of hazards, informed of areas to avoid, or sometimes simply told to stay put.

EST3-Sixty emergency communications provides the muscle that's needed in busy industrial environments: the ability to paint a vivid picture of an unfolding situation — and the tools to convey the right message through the most effective means to the people who need to know.

Disaster strikes in an instant. Without warning. But the event can resound for a lifetime. Know what you're getting into. Contact your EST representative today.

The name you trust. The brand you know.

A detailed blue-toned illustration of an industrial facility. It features several large vertical cylindrical tanks, a complex network of pipes, walkways with railings, and a large horizontal cylindrical tank in the foreground. Small human figures are scattered throughout the scene to provide a sense of scale. A blue banner with white text is positioned at the bottom left of the illustration.

See what's possible now.

An **EDWARDS** brand.

The union of a robust, field-proven communications backbone with emerging mass notification technology, EST3-Sixty represents a panoramic view of threat detection and crisis management. From its rock solid peer-to-peer network, to the intuitive event-driven FireWorks Command and Control Interface, EST3-Sixty brings the reliability of a proven life safety performer to government and military facilities of any size.
